What Is Claimed Is:

1. An artificial intellectual stock ordering system suited to deal with a stock ordering process, comprising:

an input unit for inputting transaction conditions;

an ordering computer coupled with the input unit, said ordering computer receiving the transaction conditions, and retrieving, analyzing and classifying news documents, assigning a grade to each news document, and outputting stock ordering information for ordering a stock purchase or sale, while the transaction conditions are matched and the grade is larger than a high value, or while the transaction conditions are matched and the grade is smaller than a low value;

an electronic news computer connected to the ordering computer through a first network suited to provide the news document; and

- a security company computer connected to the ordering computer through a second network suited to receive the stock ordering information to buy or sell a stock.
- 2. The system as claimed in claim 1, wherein the input unit comprises a keyboard.
- 3. The system as claimed in claim 1, wherein the input unit 1 comprises a mouse. 2
 - 4. The system as claimed in claim 1, wherein the transaction conditions comprise a glossy index.

- 5. The system as claimed in claim 1, wherein the transaction conditions comprise an individual index.
- 6. The system as claimed in claim 1, wherein the transaction 1 conditions comprise an associated index. 2.
- 7. The system as claimed in claim 1, wherein the ordering computer comprises a network server. 2
 - 8. The system as claimed in claim 1, wherein the first network and the second network consist of the Internet, LAN and WAN.
 - 9. An artificial intellectual stock ordering method, suited to a system comprising an input unit, an ordering computer, an electronic news computer and a security company computer, the method comprising the steps of:

inputting transaction conditions from the input unit and retrieving a news document of the electronic news computer via a first network to the ordering computer;

analyzing the news document with a document analyzing method;

classifying the news document to a document class;

assigning a grade to the news document according to the document class thereof; and

ordering a stock to buy or sell via a second network while the transaction conditions are matched and the grade is larger
